CONDITIONER™

Cost-Effective Compliance

Are you in compliance with your customer's temperature and humidity requirements for measuring and viewing color samples? Most retailers and branded apparel companies specify standard ASTM conditions for textile sample testing.

Are you in compliance? If not, here's the solution - **Datacolor CONDITIONER**.

Lack of Temperature and Humidity control can result in:

- More Color Rejections
- Longer Approval Times
- Higher Costs associated with Color Approvals
- Inconsistent Color Matching
- Difficulty communicating visual and digital color with others

Up to 100% of your allowable color tolerance can be consumed by temperature and humidity variations with your colored textile samples.

Datacolor CONDITIONER provides quick, cost-effective conditioning for all textile testing, including color. Contact us today for a free white paper on the effects of humidity on textile samples.

A special discounted price is offered for those who purchase prior to September 15, 2005.
